## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: claim 4 is patentable over the prior art of record because of the specific configuration of the multi-beam optical scanning device, which comprises a light source having plural luminescence parts arranged apart from each other in both a main-scanning direction and a sub-scanning direction, a rotating polygon mirror which has reflection surfaces for deflecting plural light beams emitted from the plural luminescence parts, respectively, a first optical system which is arranged in an optical path leading from the light source means to the rotating polygon mirror and converts the plural light beams into convergent light beams or divergent light beams, and a third optical system which guides the plural light beams deflected by the rotating polygon mirror onto a surface to be scanned of a drum shape having a rotation axis along the main-scanning direction, wherein, in a sub-scanning section, the respective light beams to be made incident on the surface to be scanned are made incident such that principal rays thereof form an angle with respect to a normal line of the surface to be scanned, respectively, whereby when it is assumed that a positional deviation is caused in a first direction relatively parallel to the main-scanning direction between focusing points of the respective light beams on the surface to be scanned, a positional deviation is caused in a second direction relatively parallel to the main-scanning direction between the focusing points of the respective light beams on the surface to be scanned as convergent light beams or divergent light beams are made incident on the third optical system in the main scanning direction, and, when the light beams emitted from the plural luminescence parts have a relative wavelength

difference, a positional deviation is caused in a third direction relatively parallel to the main-scanning direction between the focusing points of the respective light beams on the surface to be scanned due to the relative wavelength difference, and wherein a conditional relationship exists between the various parameters of the optical components of the scanning device. The combined limitations as currently claimed are not taught by the prior art of record considered alone or in combination.

Claims 11-14 are allowed because they are directly or indirectly dependent from claim 4 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
